ABSTRACT

Elder care is a project for old age care centers and for the users. A user, staff and admin can use the website. A user can fill an application form that contain all the details of the introducer (user) and the details of the inmate like name, age, physical state, Medical condition, doctor consultation etc. Once the registration is completed, the user can login with the email id and password. Then the user can book a room for their elders for a better stay for days, weeks or even months and take a print of their booking details. Admin can view the data of all inmates and their guardian. Admin can add rooms and make changes in the rooms. Admin can upload the inmates checkup details and the doctor review in every week and the user can view the data and download it. The user can upload the medicines taken by the inmate and the staff can view the medicines list that is used by the inmate in day basis.

Room booking

Room booking is the main functionality of this project. A user can view all rooms available and check the availability of the room. If the room is already booked by another user in the same date the user will get a notification. The user can view the booking data and download it. Admin can add all the details of room like type of room, no of rooms, image and a description about the room. Admin can also view the booking details and view bill of each user separately. The admin and staff can view the status of the user whether he is vacated or he is using the rooms.

Weekly Checkup

The user can view the weekly checkup details of the inmate and the review of the doctor. User can also download each data. The staff and admin can add the checkup update of each user weekly.

Medicine Update

The user can update all the medicine details of the inmate in morning, afternoon and night basis and the staff can view the medicine details of each user.

Update Profile

The user can update his profile details.
